

Course Overview

The purpose of the Advanced Wreck Diver programme is to build upon the basic wreck diver course and prepare divers for more adventurous wreck penetration diving. The course will introduce individual and team skills required to safely undertake challenging wreck penetration dives.

Prerequisites

To enrol in the course, you must be 18 years old and be certified as a PADI Wreck Diver or a PADI Cavern Diver.

What's Involved

This course has three components: Knowledge development, skills practice and open water dives. These will be scheduled to suit divers enrolled in each course, but typically will be run over three evenings and a weekend. The course will cover aspects of wreck diving and wreck penetration, including team protocols, advanced line use and dive planning. All skills will be practiced in a non-overhead environment and then four penetration dives will be conducted. The course will build on existing buoyancy skills and refine anti-silting techniques.

Course Skills

Line laying and team protocols, use of a backup mask, reserve light deployment, lost line drill, low-visibility exits, air sharing exits, including through a restriction, touch contact.

Why Do the Course?

This course will appeal to divers who are currently diving wrecks and undertaking limited penetration, as the skills developed during the course will increase awareness of wreck diving hazards and prepare divers for more challenging penetration dives. Combining this course with additional technical diving qualifications will prepare students for undertaking dives beyond the daylight zone.

What's Included

The standard course fee is fully inclusive of instructional time, certification costs, gas fills (excl. nitrox) and two days of boat diving. Gear hire is not included.

What You Need

In addition to standard scuba equipment, students are required to have a scuba regulator with a long hose, one primary and at least one backup torch, a spare mask, safety spool and a reel. These may be rented for the duration of the course. (Please note if you are unfamiliar with different reel types we suggest you use our reels during the course as these are specifically designed for ease of use.)

Student testimonials

"As anyone who has done any training course with Jamie, Mel or Andy knows, there are courses, and then there are courses. Some places show you enough to get the certification, Tech Dive takes it to the next notch. The Advanced Wreck is one of those courses!" [Chris B. – Auckland]
